Wetting Agents

Product Description:

Wetting Agents are advanced surfactant additives that help lower the surface tension of liquid solutions, allowing for improved spreading, penetrating, and uniform distribution of solids. Wetting Agents are used extensively in coatings, paints, agrochemicals, inks, and cleaning applications to improve substrate wetting, pigment distribution, and overall product stability.

By increasing interfacial contact between the liquid solution and the solid material, wetting agents help provide smooth applications, improved performance, and reduced defects such as craters, fisheyes, or inadequate adhesion.

Technical Data Sheet:

Property	Specification
Appearance	Clear to slightly hazy liquid
Active Content	30% – 100% (varies by grade)
pH (1% solution)	5.0 – 8.0
Ionic Nature	Non-ionic / Anionic / Amphoteric
Solubility	Soluble in water / miscible systems
Density (25°C)	0.95 – 1.05 g/cm³
Viscosity	Low to medium
Storage Stability	12–24 months in sealed containers

Packing: 25 KG
